CUMULATIVE INDEX, Volumes 26–30, 1992–1996

AIMS AND SCOPE

Water Research publishes refereed, original research papers on all aspects of the science and technology of water quality and its management worldwide. A broad outline of the journal's scope includes:

- Treatment processes for water and wastewaters, municipal, agricultural and industrial, including residuals management.
- Water quality standards and the analysis, monitoring and assessment of water quality by chemical, physical and biological methods.
- Studies on inland, tidal or coastal waters, including surface and ground waters, and point and non-point sources of pollution.
- The limnology of lakes, impoundments and rivers.
- Solid and hazardous waste management, including source characterization and the effects and control of leachates and gaseous emissions.
- Environmental restoration, including soil and groundwater remediation.
- Analysis of the interfaces between sediments and water, and water/atmosphere interactions.
- The application of mathematical and modelling techniques.
- Public health and risk assessment.
- Education and training.

NOTES FOR CONTRIBUTORS

1. Types of Contribution

Papers are published in five forms: *Full Paper, Review Paper, Technical Note, Research Note, Rapid Communication. Comments* on these papers are also welcome.

(a) A FULL PAPER is a contribution describing original research, including theoretical exposition, extensive data and in-depth critical evaluation, and is peer reviewed. The total length of a manuscript including figures, tables and references must not exceed 5000 word equivalents (8 pages in *Water Research*). Multiple-part papers will not be considered unless they are all submitted together.

(b) REVIEW PAPERS are encouraged, but must be planned in collaboration with the Executive Editor and the appropriate Regional Editor. The format and length of review papers are more flexible to fit the subject, and are peer reviewed.

(c) A TECHNICAL NOTE is an original contribution that describes a process or technique without necessarily including a theoretical exposition, extensive data or in-depth critical evaluation. The objective is to inform readers who may wish to use or adopt the process or technique. Technical Notes are no more than 3000 word equivalents (4 pages in *Water Research*), and are peer reviewed.

(d) A RESEARCH NOTE is an original contribution that describes experimental and/or theoretical research with a limited range of results, not necessarily with a complete data set, or critical evaluation in depth. The purpose is to inform readers of preliminary or limited results of research, which may be used for further development of the subject. Research Notes are no more than 3000 word equivalents (4 pages in *Water Research*), and are peer reviewed.

(e) A RAPID COMMUNICATION is an original contribution, usually of very recent research, which may not necessarily have been confirmed by detailed experiment or theoretical analysis, but which merits prompt publication. The objective is to establish priority, or to publicize a finding that has immediate significance. It is the responsibility of the author(s) to demonstrate clearly the unique features of the contribution, both in the communication itself and in the letter of transmittal. A Rapid Communication is normally restricted to 3000 word equivalents (4 pages in *Water Research*), including figures and tables, and is peer reviewed via the appropriate Regional Editor, to facilitate rapid publication.

(f) COMMENTS on papers already published are welcome, subject to the criteria of interest, originality and the approval of the appropriate Regional Editor. Comments can include extensions to, or criticisms of, those papers. They must provide arguments that are reasoned, and not presented in a confrontational fashion. They will be sent to the author of the original paper for reply, the outcome of which may be publication in a future issue. Comments and Authors' Replies must not exceed 2 pages each (1500 words).

2. Originality

Manuscripts submitted to *Water Research* must not have been published, or simultaneously submitted for publication elsewhere.

3. Paper Submission

Papers must be in English. The manuscript must be an original copy, typed in double spacing. It must be submitted, with four copies, complete with tables and illustrations, to the appropriate Regional Editor for peer review. Names, addresses and regions covered are given on the inside front cover of the journal. Where requested to do so by the Regional Editor, papers must be revised by authors within three months of the request or the paper will be considered withdrawn. No page charges apply for papers published in *Water Research*. The corresponding author will receive 25 reprints free of charge. Extra reprints and copies of the issue (at a specially reduced rate) can be ordered on the form that will accompany the proofs. Authors requiring the return of their manuscript or original material must make their request known as soon as possible, as they will normally be discarded one month after publication.

4. Content

All pages must be numbered consecutively. Figures and tables must be clearly labelled on the back of each page. Words normally italicized must be typed in italics or underlined. A manuscript would normally include a title, abstract, key words, introduction, materials and methods, results, discussion, conclusions and references.

(a) Title page. The title page must state the names and full addresses of all authors. Telephone, fax and E-mail numbers must also be included for the corresponding author to whom proofs will be sent. A short title of not more than 45 letters and spaces must be provided for page headings.

(b) Abstract. Authors are requested to ensure that abstracts for all types of contribution give concise factual information about the objectives of the work, the methods used, the results obtained and the conclusions reached. A suitable length is about 250 words.

(c) Key words. Authors must list immediately below the abstract up to 6 key words (not phrases) that identify the main points in their paper.

(d) Abbreviations and Notations. Nomenclature must be listed at the beginning of the paper and must conform to the system of standard SI units. Acronyms and abbreviations must be spelled out in full at

their first occurrence in the text. Authors should consult 'Notation for Use in the Description of Wastewater Treatment Processes', *Water Research* **21** (2), 135–139 (1987).

(e) Conclusions. Papers must end with a summary of major conclusions or recommendations, preferably in a list form.

(f) References. References to published literature must be cited in the text as follows:

Li and Gregory (1991)—The date of publication in parentheses after the authors' names.

References must be listed together at the end of each paper and must not be given as footnotes. For other than review papers authors should aim to give no more than 20–30 recent, relevant references. They must be listed alphabetically starting with the surname of the first author, followed by the title of the referenced paper and the full name of the periodical, as follows:

Li G. and Gregory J. (1991) Flocculation and sedimentation of high-turbidity waters. *Water Research* **25** (9), 1137–1143.

It is particularly requested that (i) authors' initials, (ii) the title of the paper, and (iii) the volume, part number and first and last page numbers are given for each reference.

References to books, reports and theses must be cited in the narrative. They must include the author(s), date of publication, title of book, editor(s) name(s) if applicable, page numbers, name of publisher, and place of publication. The abbreviation et al. may be used in the text. However, the names of all authors must be given in the list of references.

Personal communications and other unpublished works must be included in the reference list, giving full contact details (name and address of communicator). Personal communications must be cited in the text as, for example, Champney (1998).

References in languages other than English must be referred to by an English translation (with the original language indicated in parentheses).

(g) Illustrations and Tables. Originals of illustrations and tables must be provided with an original of the manuscript. The total number of all illustrations and tables must not exceed 10.

Photographs must be on glossy, not matt, paper and sufficiently enlarged to allow clear reproduction in half-tone. All photographs and illustrations must be mounted on separate sheets with the author's name and title of the paper on the back of each photograph or sheet. Numbers and lettering must be printed, not hand written. Colour plates can be accommodated in the journal, but authors will be charged the full cost for their inclusion.

Graphs and line drawings must be of good quality. Ordinates, legends, lettering and curves must not extend appreciably beyond points most distant from the point of origin. If these are well drawn and compact, they may be reproduced without reduction in size direct from the original. Otherwise, each dimension must be one third larger than the required printed size. Illustrations must be provided with descriptive legends on a separate sheet and accompany the manuscript. Computer-drawn graphics must be done on a high-resolution printer.

Tables and their headings must be typed on a separate sheet. Type must be clear and even across columns. Particular care must be taken with nomenclature and sub- and superscripts to ensure correct alignment. Horizontal and vertical lines must be inserted to define rows and columns, and column headings must be correctly aligned.

5. Electronic Submission

Authors of accepted papers must provide a copy on floppy disk to facilitate rapid processing of manuscripts. Disks must be labelled with: the operating system; word processing and drawing packages used; the authors' names; and a short title of the paper. All filenames must also be listed. When using symbols to denote special characters, please supply a list of all codes used. Authors must check their papers thoroughly before submission to ensure that the text on the disk matches the hard copy. If the floppy disk differs from the hard copy, the hard copy will be taken as definitive.

6. Proofs

Corrections to proofs must be restricted to printer's errors. Please check proofs carefully before return, because late corrections cannot be guaranteed for inclusion in the printed journal. Authors are particularly requested to return their corrected proofs to Elsevier Science as quickly as possible to maintain their place in the printing schedule.

7. Transfer of Copyright

Upon acceptance of a paper, authors will be asked to sign a Transfer of Copyright Agreement releasing copyright of the paper to Elsevier Science Ltd. Provision is made on the form for work performed for the United States Government (which is not subject to copyright restriction) and some United Kingdom Government work (which may be Crown Copyright).

LIST OF CONTENTS

Volumes 26–30

CONTENTS OF VOLUME 26

JANUARY

iii Notes for Contributors

MENACHEM ELIMELECH Ⓜ — 1 Predicting collision efficiencies of colloidal particles in porous media

FERNANDO J. BELTRÁN Ⓜ, VICENTE GÓMEZ-SERRANO and ANTONIO DURÁN — 9 Degradation kinetics of *p*-nitrophenol ozonation in water

S. GALASSI, L. GUZZELLA, M. MINGAZZINI, L. VIGANÒ, S. CAPRI and S. SORA — 19 Toxicological and chemical characterization of organic micropollutants in River Po waters (Italy)

TADAHIRO MORI Ⓜ, TSUGUHIRO NONAKA, KAZUE TAZAKI, MINAKO KOGA, YASUO HIKOSAKA and SHUJI NODA — 29 Interactions of nutrients, moisture and pH on microbial corrosion of concrete sewer pipes

SHIVI SELVARATNAM and MICHAEL A. GEALT — 39 Recombinant plasmid gene transfer in amended soil

N. TANI, K. SHIMAMOTO, K. ICHIMURA, Y. NISHII, S. TOMITA and Y. ODA — 45 Enteric virus levels in river water

S. NAKAMOTO Ⓜ and N. MACHIDA — 49 Phenol removal from aqueous solutions by peroxidase-catalyzed reaction using additives

YOSHIYUKI TANIZAKI, TOSHINARI SHIMOKAWA and MASAO YAMAZAKI — 55 Physico-chemical speciation of trace elements in urban streams by size fractionation

I. G. DROPPO and E. D. ONGLEY — 65 The state of suspended sediment in the freshwater fluvial environment: a method of analysis

PHILIP MORGAN and ROBERT J. WATKINSON — 73 Factors limiting the supply and efficiency of nutrient and oxygen supplements for the *in situ* biotreatment of contaminated soil and groundwater

M. REBHUN Ⓜ, R. KALABO, L. GROSSMAN, J. MANKA and CH. RAV-ACHA — 79 Sorption of organics on clay and synthetic humic–clay complexes simulating aquifer processes

J. C. AGUNWAMBA, N. EGBUNIWE and J. O. ADEMILUYI — 85 Prediction of the dispersion number in waste stabilization ponds

G. N. MATHAVAN and T. VIRARAGHAVAN Ⓜ — 91 Coalescence/filtration of an oil-in-water emulsion in a peat bed

ERNEST R. BLATCHLEY III, RICHARD W. JOHNSON, JAMES E. ALLEMAN Ⓜ and WILLIAM F. MCCOY — 99 Effective Henry's law constants for free chlorine and free bromine

I. TALINLI Ⓜ and G. K. ANDERSON — 107 Interference of hydrogen peroxide on the standard COD test

G. K. RODGER, I. M. DAVIES and G. TOPPING — 111 Retention of trace metal contaminants in the sediment at an accumulating sewage sludge disposal site

Research Notes

A. M. BEACHAM, R. J. SEVIOUR and K. C. LINDREA — 121 Polyphosphate accumulating abilities of *Acinetobacter* isolates from a biological nutrient removal pilot plant

THOMAS W. FEDERLE and BURNEY S. SCHWAB — 123 Mineralization of surfactants in anaerobic sediments of a laundromat wastewater pond

FEBRUARY

v Notes for Contributors

A. K. ZANDER, J.-S. CHEN and M. J. SEMMENS — 129 Removal of hexachlorocyclohexane isomers from water by membrane extraction into oil

Simona Čižinská, Vít Matějů, Claes Wase, Yvonne Klasson, Jakub Krejčí and Gunnel Dalhammar	139	Thickening of waste activated sludge by biological flotation

JOURNAL PACKAGES

Money-saving ways
to buy journals such as...

Atmospheric Environment
Biochemical Pharmacology
Environmental Pollution
Life Sciences
Neuropharmacology
Neuroscience
Tetrahedron Letters
Trends in Pharmacological Sciences

Which libraries benefit?

Those libraries which take all the journals from a package will see an immediate benefit and saving. Libraries which take all but one of the journals may find that they can buy the missing title for a nominal amount.

Take advantage of these packages

Subscription Agents have been informed about these money-saving packages and are in a position to help librarians take advantage of the savings offered. Contact your nearest Regional Sales Office directly for more information and help.
